Building inclusive telework in healthcare

Project Title	Building inclusive telework in healthcare
Project Slimmary	Help ensure that the post-COVID transition to telework is equitable and inclusive for diverse teams of healthcare workers
Country	United States

Project Description

Since COVID-19, telework has become a key focus for all types of employers, including hospitals and other healthcare providers. Telework is not always easy to adopt, however, and some employees may face greater challenges than others. Work is needed to ensure that the transition to telework is equitable and encourages diversity and inclusion.

The San Francisco VA Health Care System provides complex care to Veterans throughout northern California. Our mission-driven team includes clinical and administrative staff from a wide variety of backgrounds. SFVAHCS' Office of Strategic Planning is looking for creative, compassionate students who will work with our team to assess how to best meet the needs of employees who are newly teleworking and ensure that telework practices at SFVAHCS are equitable and inclusive. Students will perform research to identify best practices, engage with clinical and administrative leaders, and develop recommendations.
